

MAKING AN IMPACT ON CLIMATE CHANGE.

MISSION IN ACTION: 2019 SUSTAINABILITY IMPACT DATA

NEW LEAF PAPER'S 2019 CLIMATE-CHANGE IMPACT IS REAL.

WOOD (TREES)

Saved approximately 420,240 trees, which results in 14,403 acres not being disturbed

ENERGY

Saved 182,230 million BTU's of energy, the equivalent of 216,130 refrigerators not in use

GREENHOUSE GASES

Generated 210,620,000 FEWER pounds of carbon-dioxide equivalency, which would equal 19,128 fewer cars on the road

WATER

Saved 72,020,000 gallons of water, the equivalent of 51,880 fewer washing machines

SOLID WASTE

Generated 1,420,000 FEWER pounds of solid waste, the equivalent of 324,300 fewer people generating solid waste

SUSTAINABLE PRODUCTION PRACTICES

- **Protecting and preserving forests** by using high post-consumer recycled fiber products to replace virgin fiber
- **Reducing pressure on our waste stream** by creating more demand for wastepaper and increasing use of recycled fiber
- **Decreasing water usage** because recycled paper manufacturing uses up to 40 percent less water to make high post-consumer recycled fiber papers instead of virgin paper
- **Reducing greenhouse-gas emissions** because the manufacture of high post-consumer recycled fiber products requires less energy than virgin paper production. Additionally, by reducing the amount of wastepaper sent to landfills, decomposition is reduced, and trees continue to sequester carbon in forests

New Leaf Paper is a certified founding B-Corp whose mission is to be the leading national source for environmentally responsible paper solutions.
